Bank card verification

To use a bank card to top up an account, it is necessary to verify it. To do this, one should upload copies of the front and back sides of a bank card in the Verification section of the Client Area. Verifications section → Bank card verification.

Requirements for uploading a bank card for its verification:

1. Color and clear copies of both sides of the card.

2. A copy of the front side should contain the following information:
   - The cardholder's name
   - A validity period
   - The first six and the last four digits of the card number

3. The cardholder's signature should be visible on the back side.

4. The CVV code MUST be hidden.

5. If you verify an unnamed card, upload a document where all of the above-mentioned data is visible (with the exception of the owner's signature). It can be a bank statement or a screenshot from an online bank. When uploading a screenshot from an online bank, the page URL is required.

6. If the cardholder's name and the card number are indicated on different sides of the card, upload a bank statement or a screenshot from the online bank where the name of the holder and the last 4 digits of the card number are visible. Also, add the URL of the page (for screenshot).

PLEASE NOTE!

Verification of third-party cards is not allowed.
